#Hacktoberfest

Hacktoberfest

A month-long celebration of all things open-source.

Hacktoberfest is an open-source celebration that brings people together from all over the world to make a positive impact on open source.

Arachne Digital

Arachne is a cyber threat intelligence platform for generating and receiving threat intelligence.

Arachne provides Thread allowing users to upload articles covering cyber threats. Thread extracts the text using machine learning then maps the tactics, techniques and procedures (TTPs) in the text to MITRE ATT&CK®.

DISARM Foundation

DISARM is an open framework for those cooperating in the fight against disinformation.

Reducing the significant risks and harms to humanity requires ever better cooperation across disciplines and boundaries.

DISARM is here to help.

Worldwide Interest in **Cyber Security** has increased over 10 years

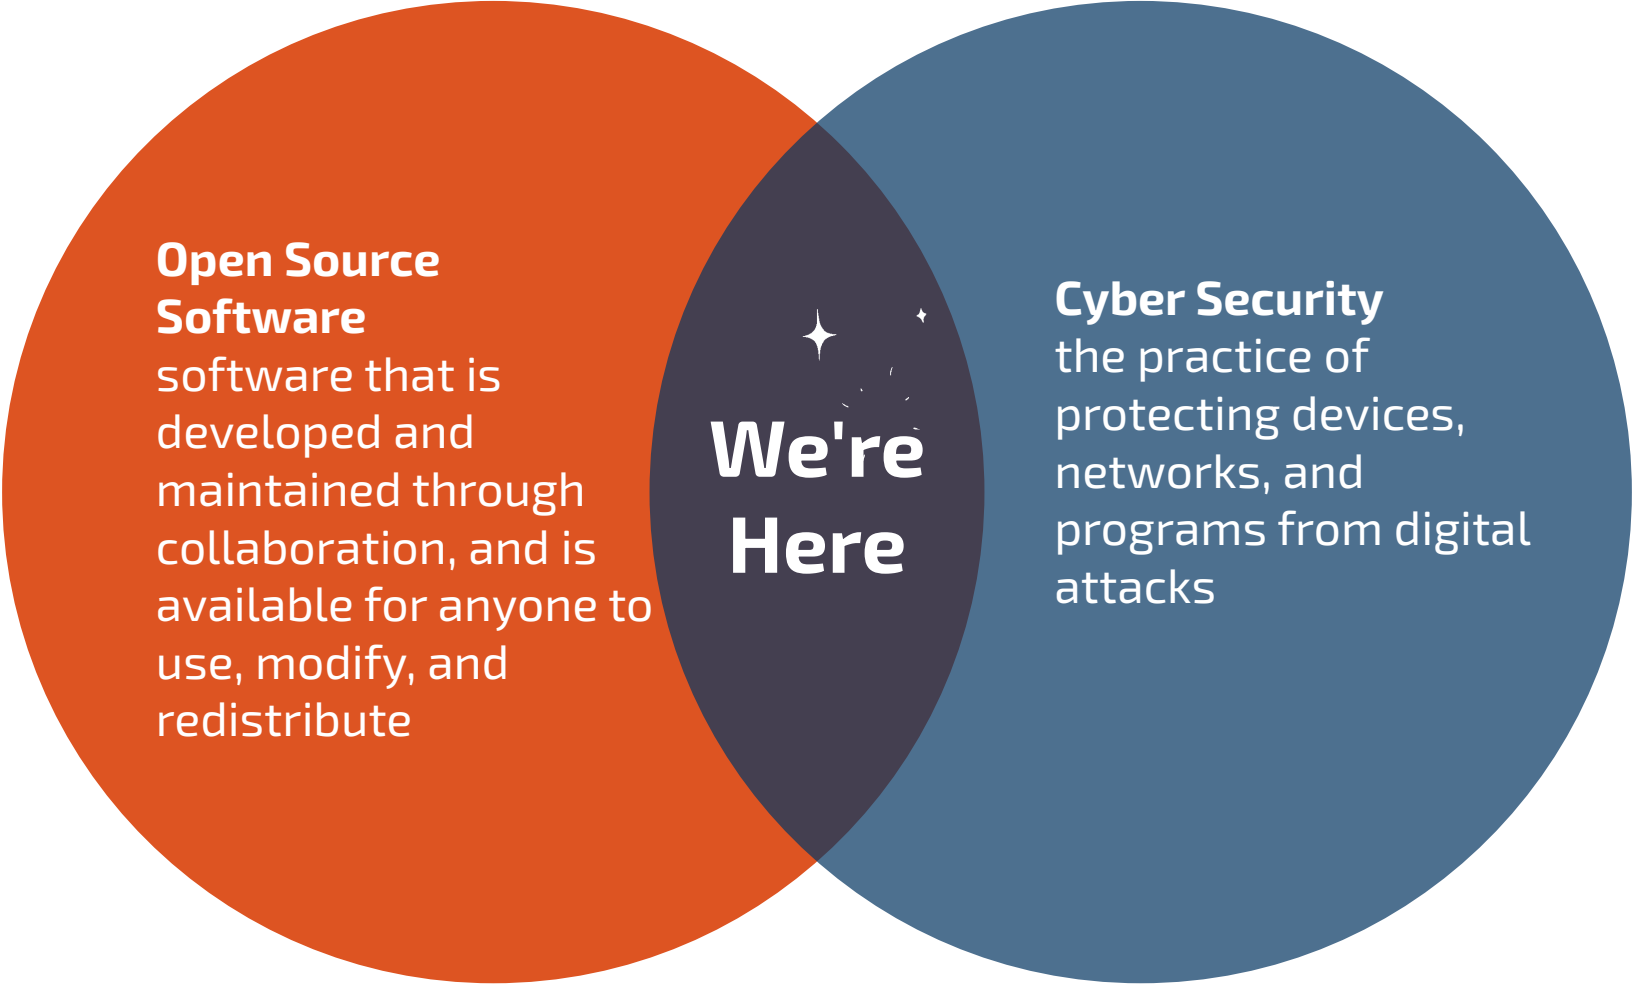

Interest over time ?

Worldwide Interest in **open source** has decreased over 10 years

Interest over time ?

A Venn diagram consisting of two overlapping circles. The left circle is orange and contains text about Open Source Software. The right circle is blue and contains text about Cyber Security. The intersection of the two circles is a darker purple color and contains the text 'We're Here' along with some small white star-like graphics.

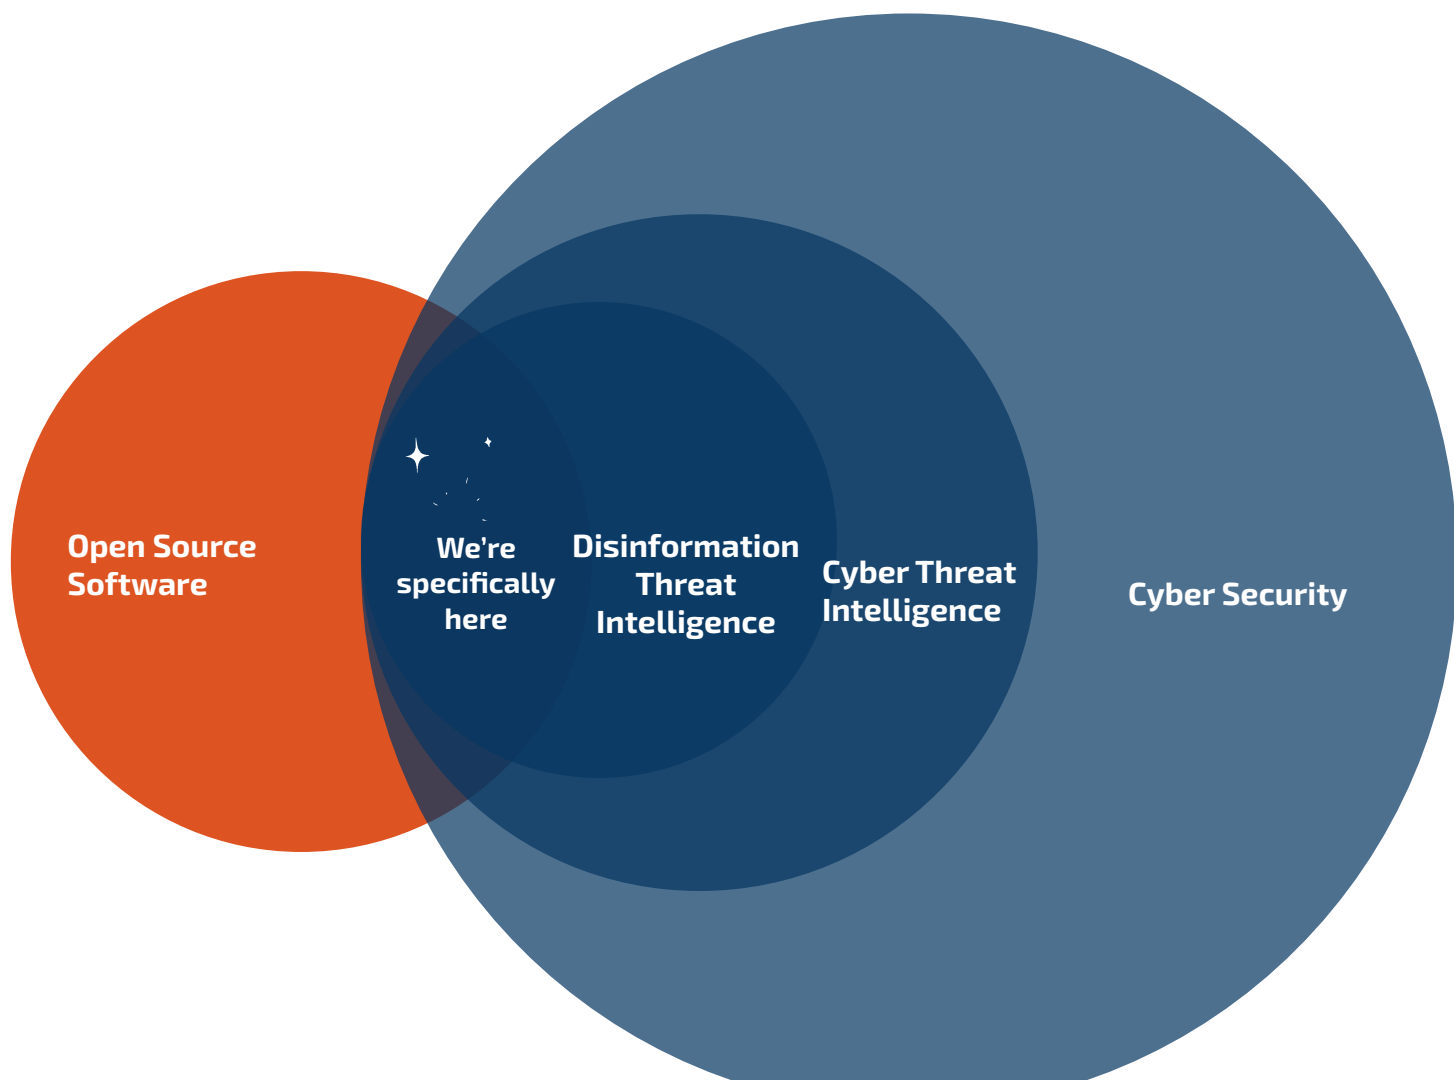

Open Source Software

software that is developed and maintained through collaboration, and is available for anyone to use, modify, and redistribute

**We're
Here**

Cyber Security

the practice of protecting devices, networks, and programs from digital attacks

Cyber threat intelligence (CTI) is the process of gathering, analyzing, and interpreting information about cyber threats to help organizations prevent or mitigate cyber attacks

It helps organizations identify potential threats and vulnerabilities, and prepare to respond to them. It provides information about attackers, their motives, and capabilities, and helps organizations understand how to spot signs that their systems have been compromised

Disinformation threat intelligence (DTI) focuses on the identification and analysis of campaigns, where false information is deliberately spread to mislead others.

Disinformation can be a threat to national security and businesses, and can be used to undermine foreign policy interests and disrupt civil discussions through the spread of misinformation and disinformation.

A globally-accessible knowledge base of adversary tactics and techniques based on real-world observations.

It covers Tactics, Techniques and Procedures (TTPs).

If you know the TTPs you care about, you know how to stop or at least detect them in a cyber attack.

attack.mitre.org/

Below are the tactics and techniques representing the MITRE ATT&CK® Matrix for Enterprise. The Matrix contains information for the following platforms: [Windows](#), [macOS](#), [Linux](#), [PRE](#), [Azure AD](#), [Office 365](#), [Google Workspace](#), [SaaS](#), [IaaS](#), [Network](#), [Containers](#).

Thread

Thread is an open-source cyber security initiative dedicated to enhancing cyber threat intelligence (CTI) mapping.

It does this by automating the process of linking cyber security reports and articles to the MITRE ATT&CK® database for identification.

It was forked from Tram and is maintained by Arachne Digital.

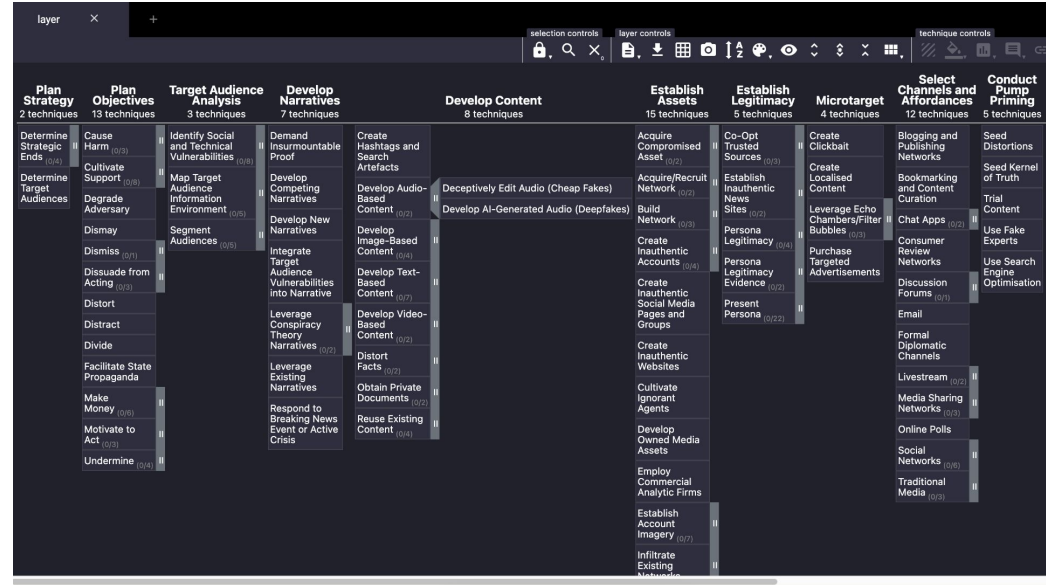

arachne.digital/thread

DISARM Framework

An open-source, master framework for fighting disinformation through sharing data & analysis, and coordinating effective action. Developed, drawing on global cybersecurity best practices.

Used to help communicators to gain a clear shared understanding of disinformation incidents and to immediately identify defensive and mitigation actions available to them

DISARM Implementation

github.com/arachne-threat-intel/thread/issues

The screenshot shows the GitHub Issues interface for the repository `arachne-threat-intel/thread`. The top navigation bar includes links for Code, Issues (15), Pull requests (1), Actions, Projects, Wiki, Security, and Insights. Below the navigation bar, there is a search bar with the filter `is:issue is:open` and buttons for Labels (17) and Milestones (0). A green button labeled "New issue" is also present. The main content area displays a list of 15 open issues, each with a title, labels, and a status indicator. The issues are sorted by the author, KadeMorton, and are all dated August 28th.

Issue #	Title	Labels	Status	Opened On	By
#130	Conduct UX/UI Review and Update for DISARM Red Framework Integration	DISARM implementation, feature request	Open	Aug 28	KadeMorton
#129	Present DISARM Blue Framework TTPs as Controls in Reports	DISARM implementation, feature request	Open	Aug 28	KadeMorton
#128	Ensure PDF Report Generation Includes and Accurately Reflects DISARM Red Framework Data	DISARM implementation, feature request	Open	Aug 28	KadeMorton
#125	Create Training Data and Build Initial Machine Learning Models for DISARM Red Framework TTPs	DISARM implementation, feature request	Open	Aug 28	KadeMorton
#124	Implement Routine Update Check and Integration for DISARM Red Framework Data in Thread	DISARM implementation, feature request	Open	Aug 28	KadeMorton
